Accident Reconstruction

After a vehicle accident, a professional investigation may be required to determine what precipitated the event, what happened, and where the responsibility lies. Rimkus Accident Reconstruction CE courses cover a range of accidents involving commercial and passenger vehicles, motorcycles, pedestrians, driverless cars, bicycles, and more. In these courses, participants are exposed to the professional methodology and emerging technology used in accident reconstruction, including during the gathering of evidence, vehicle downloads, and product failure analysis.

Animation, Graphics, & Video

Video enhancements and animations can be used to demonstrate what happened before, during, and after an incident or accident. Animations may be especially helpful during litigious matters, when consultants serving as experts can use them as demonstrative evidence to better depict an incident's events to a jury. Rimkus Animation courses cover the use of video graphics and 3D animations in insurance claims, particularly relating to vehicle accident reconstruction, security matters, and dispute resolution.

Animation, Technology & VAR	(Credit: 1 hour)
Dispute Resolution Methodology	(Credit: 1 hour)
Technology in Dispute Resolution*	(Credit: 1 hour)

The header image features a dark blue background with a diagonal split. On the left, a human head is shown in profile, rendered in a semi-transparent, anatomical style, revealing the brain and internal structures. On the right, a more realistic, light-colored brain is shown, also in profile, appearing to emerge from or be part of the same anatomical structure. The overall aesthetic is scientific and medical.

Biomechanical / Biomedical

Rimkus Biomechanical and Biomedical expertise encompasses a combination of physics, anatomy, physiology, human kinematics, and reconstruction dynamics used to evaluate accidents, claims, and legal disputes pertaining to personal injuries, fatal events, vehicle accidents, and more. Our Biomechanical and Biomedical continuing education courses review methodologies and considerations in biomechanical evaluations for a range of claims investigations. Presentation topics include but are not limited to low-speed collisions, medical device and equipment evaluations, workers' compensation cases, slip and falls, and serious injury causation.

Building Consulting

Loss Management Solutions, Inc. (LMS), a Rimkus company, provides comprehensive approaches toward streamlining the mitigation process for the commercial property insurance claims community. When there is property damage from fire, flood, weather, and/or other events, our team's extensive restoration background allows us to provide building consulting expertise related to determination of damage, identification and triage of critical business priorities, and the appropriate action to take. LMS continuing education courses offer building consulting knowledge on ethical considerations, damage assessment, cost control, safety, and other factors that contribute to a successful recovery effort.

Catastrophe

Rimkus serves as an efficient, professional response team providing forensic evaluations following catastrophic events. Our consultants are knowledgeable in matters relating to civil, structural, architectural, and mechanical engineering; toxicology; environmental factors, and other elements involved in catastrophic evaluation. Current Rimkus Catastrophe continuing education courses review structural and property assessments of damage caused by hurricanes, tornadoes, earthquakes, landslides, floods, wind, hailstorms, and other storms and weather events.

Wind vs. Surge: Hurricane Damage Assessment*	(Credit: 1 hour)

Construction

From conception and design through completion and closeout, there are many elements to be considered during a construction project. Our Construction continuing education courses review topics relating to a wide variety of claims and disputes occurring in the built environment, including but not limited to vibrations, liability and workplace accidents, cranes, leak detection, green construction, schools and municipal buildings, pools and spas, cold weather climates, HVAC system failures, and the use of emerging technology.

Electrical

Rimkus Electrical continuing education presentations apply an engineering perspective to the investigation of electrical fires and failures related to appliances, HVAC systems, power surges, lightning, smart vehicles and homes, and utility claims. CE participants can expect to gain knowledge of fundamental electrical principles, definitions, facts, myths, and investigation methodologies.

Electrical Appliance Failures	(Credit: 1 hour)

Environmental

Rimkus Environmental consulting services pertain to the origin and cause assessment of pollution and sources, environmental remediation analysis, industrial hygiene, mold, air quality, workers' compensation claims, and environmental safety concerns. We offer expert-taught CE courses covering aspects of environmental claims analysis and remediation, site assessments, and contamination, as well as hydraulic fracturing in natural gas drilling, legionellosis, mold, chemical exposure, water damage, and vapor intrusion.

Fire

Our continuing education presentations on fire investigations involve the evaluation of fires in vehicles, lithium-ion batteries, chimneys and fireplaces, residential clothing dryers, commercial cooking systems and structures, industrial buildings, explosions, arson, and more. Rimkus Fire CE courses often include a live burn component, as well as insight into the origin and cause analysis of a wide range of fire events, and how professional fire investigations may assist with claims resolution.

Human Factors

Human Factors studies the capabilities and limitations of humans as they interact with their environments and the products, systems, and equipment within those environments. Rimkus Human Factors continuing education courses provide insight into the application of Human Factors principles to insurance and legal industry matters. Topics covered include warning evaluations, driver distraction and other transportation safety issues, retail claims and accidents, and premises liability.

Industrial / Energy

Rimkus Industrial/Energy expertise includes forensic investigations involving onshore and offshore oil and gas exploration, oil and natural gas processing, petroleum refining, petrochemical manufacturing, power generation, and renewable energy. Our continuing education presentations cover these subjects through courses on combustible dust explosions, chemical accidents, refinery and chemical building blocks, oilfield accidents, hash oil explosions, and other industry-facing topics.

A photograph of a marina at dusk or dawn, with several white yachts docked at wooden piers. The water is calm, reflecting the sky and the boats. In the background, a building with a lit window is visible. The image is split diagonally, with the top-left portion being dark blue and the bottom-right portion showing the actual scene.

Marine Forensics

From the time cargo is loaded until it reaches its destination, both the cargo and the vessel carrying it are subjected to the risks associated with nature and human error. The Rimkus Marine Forensics Practice investigates incidents and accidents involving marine vessels and facilities to explain what happened and, where possible, how to avoid the same issues in the future. Led by marine engineers, naval architects, civil engineers and marine-certified fire investigators, Rimkus Marine Forensics CE courses cover the forensic evaluation of a wide array of maritime incidents and accidents involving catastrophic weather, collisions, vessel sinkings, groundings, fires, equipment failures, injury accidents, and damage to piers and wharves.

Marine Vessels: Human Factors and Premises Liability Analysis*

(Credit: 1 hour)

Miscellaneous

Our experts are a diverse group of professionals who provide clients with a wealth of expertise spanning multiple industries. The miscellaneous continuing education courses are comprised of topics as extensive as our consultants' backgrounds. Presentations in this section cover ethics, materials science (the study, discovery, and design of materials), and more.

Good Faith, Bad Faith, and No Faith at All*	(Credit: 1 hour)
Handling the Truth*	(Credit: 1 hour)
Hiding Places - Protection & Privilege	(Credit: 1 hour)
How to Select and Use Consultants	(Credit: 1 hour)

Premises Liability

On-premises accidents may lead to serious injuries, which can be devastating to patrons and costly for businesses. Whether accidents occur on public or private property, issues can arise regarding a facility's design, construction, maintenance, and compliance with applicable codes and regulations. Rimkus offers a variety of CE courses designed to address matters related to premises liability. Participants in these courses will learn about investigations of matters related to slip, trip, and fall accidents; failures of products and equipment, such as shelving or chairs; and other issues pertaining to hospitality and the built environment.

Safety and Security

Safeguarding guests, employees, and the surrounding premises is a top priority for any property, and effective planning is key to preventing security issues. Our experts have extensive experience evaluating site conditions to help reduce risks and develop plans for safety and security. We offer continuing education courses related to physical security, access control, emergency response, crisis management, premises liability, and accident reconstruction.

Event Security: Fundamentals, Risks, and Implementing a Plan	(Credit: 1 hour)
Force Continuum: Best Practices for Security*	(Credit: 1 hour)
